

Ahmed Abdullahi

Database Platform Engineer — Production Reliability & Automation — Oracle — PostgreSQL — GCP
Louisville, KY — (502) 792-5573 — ahmed.abdullahione@gmail.com — LinkedIn — GitHub — Portfolio

PROFESSIONAL SUMMARY

Database Platform Engineer with enterprise experience supporting business-critical database environments across on-premises and cloud infrastructure. Hands-on experience in production support, database automation, monitoring, auditing, access management, UAT, and performance troubleshooting using Oracle, PostgreSQL, GCP, BigQuery, SQL, PL/SQL, Python, and shell scripting. Progressed from intern to Database Analyst Co-op to Database Platform Engineer while supporting large-scale production operations at UPS.

TECHNICAL SKILLS

Databases: Oracle RAC, Oracle Multitenant, Oracle PDB, PostgreSQL, AlloyDB, BigQuery, SQL Server, MySQL, MariaDB, SQLite

Automation & Programming: Python, SQL, PL/SQL, Bash/Shell Scripting

Cloud & Infrastructure: Google Cloud Platform (GCP), AWS, Linux, Docker, Cloudflare

Platform & Database Operations: Production Support, Database Monitoring, Performance Troubleshooting, Database Patching, Automation, Auditing, Access Management, ETL, UAT, Data Validation, API Integration

PROFESSIONAL EXPERIENCE

UPS

Louisville, KY

Database Platform Engineer

Aug 2025 – Present

Database Analyst Co-op

Sep 2023 – Aug 2025

ISM Intern

May 2023 – Aug 2023

- Support business-critical enterprise databases powering UPS healthcare applications, Worldport package sortation, warehouse operations, logistics platforms, and production services.
- Diagnose and resolve database availability, application connectivity, storage capacity, and performance issues affecting time-sensitive package processing and warehouse operations.
- Execute controlled production and UAT database changes, including patching, access management, validation, auditing, and compliance-related operational support.
- Automate recurring database validation, auditing, job execution, access-control, monitoring, and reporting workflows using SQL, PL/SQL, Python, and shell scripting.
- Build GCP and BigQuery dashboards from audit and usage data to monitor query activity, user behavior, job execution, and data-access patterns.

University of Louisville

Louisville, KY

IT Student Help Desk Technician

Oct 2022 – May 2023

- Supported students, faculty, and staff with hardware, software, account access, operating system imaging, and classroom technology issues.

PROJECTS

Multi-Database Operations Platform

Python, SQL, ETL, APIs

- Engineered a database operations platform supporting Oracle, PostgreSQL, MySQL, MariaDB, SQL Server, SQLite, CSV, JSON, Excel, and API-based data sources.
- Developed connection management, multi-source SQL execution, file and API ingestion, source-routing workflows, query output rendering, and error handling.
- Built reusable ETL, data transformation, scheduling, and automation workflows across database, file, and API sources.

Rocket Launch Weather ML Capstone

Python, H2O AutoML, Scikit-learn, Machine Learning

- Developed a machine learning solution to evaluate weather conditions and predict whether conditions were suitable for a safe rocket launch.
- Used Python, H2O AutoML, and Scikit-learn to prepare weather data, train and compare machine learning models, and evaluate predictive performance.

AI Google Slides Maker

Django, Docker, Linux, Google Slides API

- Built and deployed a Django application that converts user prompts and structured slide and scene JSON into Google Slides presentations.
- Integrated Google Slides API workflows and managed Docker deployment, Linux hosting, backend processing, domain routing, and Cloudflare configuration.
